Introduction

The Insulation Minipen™ has been designed by a diabetic to be the smallest, low cost and most practical insulin delivery system on the market. With early adopters lined up and financing from a select group of investors, we will commission a production line to produce the smallest Insulin delivery device in the world.

We hold two existing patents and will submit two further global patents in Q4 2018 to generate additional income streams. We aim to be the leading supplier of miniaturised insulin delivery devices on the market.

This is a genuine opportunity to make a difference to millions of lives impacted by diabetes. Please contact us if you would like to help us achieve our mission by investing in our company.

Diabetes has become a worldwide epidemic, impacting the lives of 500 million people globally.

One in Eleven people suffer from Diabetes and over 3 million people die every year due to Diabetes.
